

Cap Closure Liner Industrial Waste Facility Completed: 2Q13

US FUSION installed 357,000 SF, approximately 8 acres, of 60 mil textured linear low density polyethylene (LLDPE) geomembrane for a cap closure project in an industrial site's private hazardous waste landfill. This project also included 2 fabric formed concrete downdrains for erosion control prevention of rainwater runoff. 40 hour HAZWOPER training was required for all crew personnel working onsite.
