

# HDPE Pipe Fabrication & Installation Petrochemical Plant Completed: 4Q13

US FUSION recently completed a unique project at a local petrochemical facility. The scope of work included shop fabrication of 400 spools, transport, field fusion for tie ins, placing and installing in pipe rack and hydrotesting of 3/4" - 14" HDPE Pipe. USF used cranes for lifting of pipe spools into rack and utilized HDPE electrofusion couplers for vertical and horizontal tie ins. Electrofusion enabled USF to fuse tight dimensions in a difficult, above grade, in rack application.
