

# HDPE Pipe Install Petrochemical Plant Completed: 1Q13

US FUSION recently completed a rather unique project at a local petrochemical facility. The scope of work included the fusion, handling and testing of 2,600 LF of 10", 14" & 16" HDPE pipe. USF then banded the pipes together and set all three HDPE pipelines on a roller system to be directionally drilled. After completion of the horizontal directional drill (HDD), USF then successfully pigged all 3 HDPE lines prior to tie-ins.
