

HDPE Concrete Protective Liner Embed Water Treatment Facility Completed: 4Q13

US FUSION recently completed one of the largest HDPE concrete embedment projects in the US. USF installed 3mm and 5mm HDPE concrete protective liner/embed to all exposed surfaces (floors, walls & ceilings) in a 180' x 75' x 24' deep water treatment structure consisting of 11 individual tanks. USF utilized man lifts to safely install and weld the 24' vertical walls. Typical panels consisted of 16' x 24' butt welded HDPE Studliner. The project was completely safely and within the scheduled time frame.
